

GREEN COLLEGE INTERDISCIPLINARY SERIES: POPULATION HEALTH

The University of British Columbia is internationally recognized for its contributions to the creation of "Population Health" as an interdisciplinary field concerned with the powerful role of a host of non-medical determinants of health, development, and well-being across the life course, particularly social and economic factors. The Population Health Speakers Series aims to bring together faculty, students, practitioners and policymakers interested in these issues. The series will have a particular focus on the social sciences and their intersections with other disciplines within population health. Monthly meetings will typically feature an invited scholar who is conducting cutting-edge research integrating innovative theoretical perspectives and/or developing novel methods for use in advancing population health science and improving practice and policy. The speaker's presentation and subsequent "brainstorming" dialogue with the audience will be designed to appeal to a broad range of interests and so have potential for informing the ideas, research, and practices of faculty, students, and local agency representatives.

ALL EVENTS ARE AT THE GREEN COLLEGE COACH HOUSE (UNLESS OTHERWISE INDICATED), AND OPEN TO THE PUBLIC WITHOUT CHARGE

FOR MORE INFORMATION: WWW.GREENCOLLEGE.UBC.CA OR GC.EVENTS@UBC.CA
